Claim 2; Page 4; 5pp; German.
The DNA may be used as a hybridisation probe for detecting the HLA
B27 gene, e.g. for assessing susceptibility to rheumatic disorders
such as ankylosis spondylitis, or may be used to transform cells
for prodn. of HLA B27. The HLA B27 may be used to detect HLA B27
antibody in human serum, or to produce mono- or polyclonal HLA B27

T or diagnosis and antigen and antibody prodn.

T for diagnosis and antigen and antibody prodn.

T for diagnosis and second antigen and antibody prodn.

T for man genetic material. The HIA-B 27 gene (opt. mutated) in thuman genetic material. The HIA-B 27 may be used to detect anti-HIA-B 27 antibodies in human serum. The antibodies may be used to detect mine HIA-B 27 antibodies in human serum.

C determine HIA-B 27 levels in human serum.

Detecting pre-disposition to seronegative spondylarthropathies - Trom the absence of a C residue at a specific position in the from the absence of a C residue at a specific position in the 3'-flanking region of the HLA B27 allele Genetic predisposition to seronegative spondyloarthropathies (SNSA) is detected by determining the absence of a cytosine nucleotide in the 3' flanking region (see also T61647-48) of an HLA-B gene at a position corresponding to nucleotide 4455 of the HLA-B37 consensus sequence given in T61639. Probes and primers (see also T61640-46) chased on this region can be used in diagnostic assays to detect the genetic predisposition to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA, romal individuals who are susceptible (but as yet unaffected) to such diseases. Claim 2: ppil-12: 23pp: English.

The HLA class I DNA can be used a source of probes for use in DNA typing. Transformed cells, which are useful as immunogens, can be sequence by introducing these DNAs into eucaryotic cells.

Allotype specific monoclonal anti- HLA antibodies prodn. - using hibbridomas derived from transgenic animals carrying HLA gene and immunised with HLA antigen of different allotype.
Disclosure: Fig 1 A-G; 20pp; English.
The human HLA-Bw52 gene was introduced into mouse L cells and then these cells used to immunise one of the transgenic mice (see Q05693).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 005701;
03-JAN-1991 (first entry)
HIA-BW52 gene for production of monoclonal antibodies.
Alloptype specific monoclonal anti-HIA antibodies; hybridomas;
transgenic animals; HIA-BW52 gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ë

Transgenic non-human mammalian HLA-Bw 52 gene - useful for analysis of expression of gene structure, and prodn. of nalysis of expression of gene structure, and prodn. of neulaysis of expression of gene structure, and prodn. of neulaysis of expression of the human leukocyte or antigen Bw 52 gene. The complete gene may be introduced into non-human mammals, pref. rat or mouse, or their ancestors at the primary developmental biological step via transplantation into the zygote or embryo to generate transgenic non-human mammals contg. HLA-Bw 52 are useful for the analysis of capression of the gene, its structure, and prodn. of mouse models of capression of the gene, its structure, and prodn. of mouse models of sequence 270 BP; 59 A; 88 C; 86 G; 37 T;
                                                                                                                                                                                                                                                                                                                                                                                                                            09-WAR-1993 (first entry)
HIA-Bw 52 exon 2 alpha-1 domain.

New DRA for class I human leucocyte antigens and derived probes and transformed cells, useful for DNA typing, as immunogens etc.

T transformed cells, useful for DNA typing, as immunogens etc.

Claim 1: Page 11: 23pp; English.

Claim 1: Page 11: 23pp; English.

The HLA class I DNA can be used a source of probes for use in DNA ctyping. Transformed cells, which are useful as immunogens, can be cotyping. Transformed cells, which are useful as immunogens, can be sequence 1086 BP; 224 A; 334 C; 356 G; 172 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-37N-1991 (first entry)

Allotype specific monoclonal anti- HLA antibodies prodn. - using hybridomas derived from transgenic animals carrying HLA gene and hybridomas derived from transgenic animals carrying HLA gene and produced with HLA antigen of different allotype bisclosure; Fig 1 A-G; 20pp; English.

The human HLA-BSI gene was injected into fertilised mouse eggs and then these introduced into the uterus of a pseudo pregnant mouse. The young were tested to ensure incorporation of the gene into the chromosome, and one of them mated 3 times with a normal male to produce 16 young, seven of which carried the HLA-BSI gene. The pransgened. Offspring were immunised with HLA antigen. The spleen lymphocytes were fused with myeloma cells. Hybridomas producing antibodies were selected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human leukocyte antigen; probe; major histocompatibility complex;

New vectors for genetic meterial encoding one or more cistron(s) which express immunogenic or therapeutic peptide(s) page 42-43: 50pp; English.
This HLA-B7 antigen encoding hasmid was developed to incorporate many advantageous features, eg. the kanamycin resistance gene. The eradication of two open reading frames encoding portions of SW40 viral proteins lowers the risk of tumourigenicity. The vector may also operate as a cassette into which cistrons may be inserted and removed at will for the transcription and subsequent translation of peptides of interest.
                                                                                                                                                                                                                                                                                            23-AUG-1995 (first entry)
pHLA-B7 expression vector.
pHLA-B7; bicistronic mRNA;
expression vector; pHLA-B7; heavy human HLA-B7; bicistronic mRNA;
light beta-2 microglobulin; class I major histocompatibility complex;
MHC; human leukocyte antigen; HLA; covalently closed circular DNA; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for the Schmidt-Rupin strain nucleotides 8673-9146. This region also includes a 56 bp region of a synthetic oligonucleotide which modifies this regulatory sequence to effect a higher level of expression of downstream sequences. The oligonucleotide removes a polyadenylation signal sequence originally found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HLA-B7 heavy

19-MAY-1998 (first entry)
Human Class I non-classical HLA gene exon 2 consensus DNA.
Human leukocyte antigen class I gene; non-classical HLA; allele testing;
donor; tissue matching; recipient; graft rejection; class typing; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIA-C gene, DNA probe and transformant cells - for immunisation of animals and monoclonal antibody development.
Claim 1; Page 1; 13pp; Japanese.
Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-C animals and prodn. of monoclonal antibodies specific for the HIA-C sequence 1101 BP; 211 A; 337 C; 377 G; 176 T;

VO2693 is a consensus sequence of the human leukocyte antigen (HLA) Class VO2693 is a consensus sequence of the human leukocyte antigen (HLA) Class I non-classical HLA genes exon 2, which is used in a novel method for testing a tissue sample to determine the allelic type of a HLA class I gene in the sample. The HLA Class I gene is selected from among HLA-A, be and c genes. The method comprises of treating the tissue sample to obtain nucleic acid polymers suitable for amplification then combining these polymers with a first primer which hybridises with a different portion of the HLA Class I gene and a second primer which hybridises with a different portion of the HLA Class I gene under conditions suitable for amplification to obtain an amplified product. The product is then evaluated to determine the allelic type of the antigens between donors and recipients and hence for preventing graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14-MAY-1991.

T HLA-B35 gene - used in DNA probe and transformant cells for immunising animals, for developing monoclonal antibody.

Claim 1; Page 1; 11pp; Japanese.

C Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and produ of monoclonal antibodies specific for the cannals and produ of monoclonal antibodies specific for the sequence 1089 BP; 221 A; 336 C; 359 G; 173 T;

HIA-C gene, DNA probe and transformant cells - for immunisation of animals and monoclonal antibody development.

Claim 2; Page 1; 13pp; Japanese.

Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and produ. of monoclonal antibodies specific for the HIA-C animals and produ. of see also glaif (same patent) and J03112486 and J03112487. Sequence 1101 BP; 215 A; 335 C; 379 G; 172 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HIA-C exon Cb-2.

Himan leukocyte antigen; probe; major histocompatibility complex; MHC; class I; ss.

Homo sapiens.

/clone_vector: Lambda ZAPII: Site_1: Eco RI; Site_2: Xho
I: mRNA was prepared from normal adult human islets. CDNA
was directionally synthesized from the Xho I in the vector
to the EcoRI site. CDNA was size fractionated to remove
sequences <1000 bp in size."

WARNING: There is evidence that suggests that the 384-well parent
plate of this clone tontains both human and mouse derived clones.
Thus, the origin of this clone is uncertain. This caution should be
kept in mind should you use this clone.

Peptide B2702.70-84 tested for immunomodulating activity.
Immunomodulating dimer: Immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain; 

rejection. Synthetic. Homo sapiens. W09744351-A1. 27-NOV-1997.

R83090 standard; peptide; 25 AA.

WALLY, $48.0802304048.

New immunomodulating dimer peptide(s) - based on a class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.

For treating autoimmune diseases.

Example 1; Page 19; 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating activity, A peptide-type compound or variant is claimed which has a minomodulating activity, including the N-terminal acylated and/or creminal anidated or esterified forms of up to 60 amino acids, where to the peptide-type compound comprises the formula: A-B, where A, B = creminal anidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula: A-B, where A, B = creminal amino acid; aa80 = R or G; aa80 = I or N; aa81, aa81 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino acid sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B alphal domain (positions or 19-84). They can be used to inhibit cytotoxat. T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They are also inhibit the proliferation of T cells in a combination and interest can also be used for taetection and diagnosis. The products can also be used for detection and diagnosis. The products can also be sequence 15 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mew populate(s) based on class I HLA antigen domains - used for modulating cytocoxic T-lymphocyte activity towards targets T-lamphocyte activity towards targets Tolaim 8; Page 53; 61pp; English.

The peptide (or a fragment of at least 10 amino acids, joined at at least one terminus to a sequence other than that of wild type HLA antigen) is used to modulate cytotoxic T-lymphocyte (CTL) activity, and thinbition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.

R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-R2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HIA-B2702.60-84...

from a T-cell lysather of the state of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound Hi-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with this sequence, induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate composition containing the amount of antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74. Modulation of certacellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PER PERION K, Liapperger C, Michary AM;
WHI: 98-086530708

New immunomodulating dimer peptide(s) - based on a Class I HLA-B
alpha-1 domain, used for preventing rejection of transplants or
reating autoimmune diseases

Example 1; Page 19; 41pp; English.

PER CALIVITY A Peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or
C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, Sor N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or
Small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino acid sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise at any peptide type bond within the brackets. The compounds comprise or at any peptide type bond within the brackets. The compounds comprise or any peptide type bond within the brackets or a class I HLA-B alphal domain (Positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CDS. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes,

The peptide is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 4; Page 45; 103pp; English.

R71439-R71443 are human major histocompatibility complex class 1
R71439-R71443 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain and HLA derived peptides and fusion peptides.

They were used to modulate interactions between MHC 1/HLA and cell
surface receptors. Via competitive inhibition the peptides diminish
the receptors response, this feature may be useful for the treatment
of neoplasias, lupus erythematosus and arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                              12-0cT-1995 (first entry)
Human HLA-B27-(62-85) antigen derived peptide.
Human HLA-B27-(62-85) antigen derived peptide; cell receptor;
Interaction modulation; arthritis; neoplasias; lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         15-WAR-1994 (first entry)
Peptide fragment of HLA-B2705 antigen.
Human leukocyte antigen; HLA: peptide: transplantation; neoplasia;
parasitic disease; cytotoxic T lymphocyte; modulation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 13; Page 32; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HLA-B3702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to fare the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HLA-B2702 CTL modulating peptide (B2702.60-84).

The sequence and the sequence and transments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the HLA-B2705.60-84. These sequences can be used to isolate the protein of from a T-cell lysate. P74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. P74 is found in a limited number of cell types, but is particularly expressed on a panited number of cell types, but is particularly expressed on amphoteric detergent, and then passed through an affinity column amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with the HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic cativity of CT-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74.

Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete containing the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Such DNA, antigen or antibody
Disclosure: Page 5: 5pp; German.
The DNA may be used as a hybridisation probe for detecting the HLA
B27 gene, eg for assessing susceptibility to rheumatic disorders
such as ankylosis spondylitis, or may be used to transform cells
for prodn. of HLA B27. The HLA B27 may be used to detect HLA B27
antibody in human serum, or to produce mono- or polyclonal HLA B27
sequence 337 AA;

DNA coding for human histocompatibility antigen HLA-B 27 - useful for diagnosis and antigen and antibody prodn.

Disclosure; p6; 13pp; German.

THe DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to determine HLA-B 27 levels in human serum, eg for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mew peptide(s) based on Class I HIA antigen domains - used for modulating cytotoxic T-lymphocyte activity towards targets
Example 13; Page 39; 61pp; English.
The peptide is used to modulate cytotoxic T-lymphocyte (CTL)
The peptide is used to modulate cytotoxic T-lymphocyte (CTL)
The peptide is used to modulate cytotoxic T-lymphocyte (CTL)
Inhibiting CTL toxicity in transplantations, for inducing CTL
activity in parasitic diseases and neoplasia and in studies on viral
infection. The peptide can also be used for identifying CTLs which
bind to it and removing subsets of CTLs from a T-cell composition.
This peptide is derived from the HLA-B38 antigen and corresponds
Sequence 25 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human leukočyte antigen; HLA; peptide; transplantation; neoplasia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 13; Page 32; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HLAB38. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HLAB38 CTL modulating peptide (B38.6084).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLAB38.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIA: p74; alphal-helix; human-leucocyte-associated antigen; inhibitor; T-cell lysate; membrane protein; mammal; heat shock protein; Hsc70; APC; B cell; calcium influx; cytotoxic T lymphocyte; CTL; differentiation; cytolysis; antigen presenting cell.

human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the HIAB18.6084. These sequences can be used to isolate the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the hear shock protein H870.0 p74 is found in a cross lamited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable cell with an amplication comprising then passed through an affinity column compositions comprising then passed through an affinity column compositions comprising the extracellular fragment of p74 combined with HIA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCs), by adding to the with p74 for the binding of the p74 in an amount sufficient to compete with p74 for the binding of the p74 ligand.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
